## OBJECTIVE

Hello! I'm working as QA Engineer for a long time and at one moment I decided that I want to do something new. After that I signed up for courses on the front-end development, studied hard and now I opened for new projects. My site is <http://akozyreva.ru>

## WORK EXPERIENCE

### DIGITAL ECONOMY LEAGUE

**August 2014 — Present**

QA Engineer

Full-time work. In this work I have 2 main projects: Sberbank and Private Office Of Russian Registry. In Sberbank's project I tested site of Russian Bank, which was moved on platform Backbase. My responsibilities on project Sberbank were:

- cross-browser testing (support IE 7+);
- cross-platform testing (mobile, tablet, web);
- testing back-end (rest-services and correct answers);
- testing front-end (for example: correct work of credit calculator)
- regression testing;
- interaction with an external testing team (contractor);
- smoke testing;
- working with Kibana;
- making bug reports;
- data migration, using sql-scripts and git;
- writing and reviewing test cases (TestRail);

Tools: Postman, Oracle Sql Developer, Photoshop, Git

Project Private Office Of Russian Registry is my current project. I test the personal office of Rosreestr, where users can put their object of cadastral registration in non-availability or order an extract for the property or order any other service from Rosreestr online. My team works, using Agile. My responsibilities are:

- regression testing;
- functional testing;
- smoke testing;
- writing autotests (entry level);
- making bug reports;
- release testing on the product.

Also I wrote autotests (architecture = TestNG+Maven+jenkins), the autotests project was left behind by a previous tester, who wrote a self-contained auto-test framework.

What was remembered at work: once I was instructed to collect statistics on the attendance of the personal cabinet. I did not want to do it manually and wrote a script in python (v. 3+) and set up jenkins so that the script would collect statistics and update the Google table with statistics.

Tools: bash, postgresql, Postman, Git, selenium, xml, json

## Freelance

September 2016 — August 2017

QA Engineer

I had freelance project (~11 months) - I helped development team in testing CRM for furniture store. My responsibilities were:

- regression testing;
- functional testing;
- testing layout (masks were in Zeplin)
- making bug reports.

Tools: Zeplin, Youtrack

## S&T International

June 2013 — August 2014

QA Engineer

Part-time work. It's my first serious project there - I studied in university and worked as QA in the free time. I tested the telephone operator system and the system, coordinating the work of engineers on installation of telephone and Internet equipment. My responsibilities were:

- regression testing;
- functional testing;
- integration testing;
- making bug reports;
- writing and reviewing test cases.

Tools: VPN Client, Jira, Outlook, Team Foundation Server

## PROFESSIONAL SKILLS

Web Skills: native Javascript, Vue.js, Git - entry level. HTML, CSS, LESS, Stylus, Gulp, Webpack;

QA Skills: Manual Testing, Testing REST/API, Regression, Functional, Smoke testing, Selenium (entry level), Writing test cases, making bug reports, Testing Layout.

## EDUCATION

### Froncubator

September 2017 — Present

Web Development Course

I study on web-development course (<https://froncubator.com>). My learned skills:

- HTML
- CSS
- Less, Stylus
- Gulp

Now I study Vue.js and javascript object-oriented programming. My works you can see here: <http://akozyreva.ru>

### State University of Management (SUM)

September 2010 — June 2015

Mathematical Methods in Economics

I finished faculty of Mathematical Methods in Economics. My favourite subjects were:

- Higher Mathematic
- Linear algebra
- History of Economic Thought

## INTERESTS

Reading, Music and Travelling.

## LANGUAGES

English: Fluent, German: Beginner, Russian: Native.
